Work experience

Energy Smart Solutions

Singapore

Since January 2019

Founder and Director

Start-up Company (www.es-solutions.eu) providing solutions and consulting for C_{APEX}, O_{PEX} and CO₂ savings

- Master planning and design of greenfield projects - highly integrated energy-mix and different end-user demands
- Optimal Dispatch and Unit commitment problem solving for optimal operations:
 - *Integrating and retrofitting renewable energy, cogeneration solutions, energy storage systems;*
 - *Performance and condition monitoring for optimal maintenance and operations, by the integration of Artificial Intelligence.*

Shell

Singapore

November 2018 – June 2019

Consultant

Energy and CO₂ Footprint Reduction Study for Shell Jurong Island Petrochemicals Complex

- Pinch Point Analysis technique and energy optimization by integrating and retrofitting the actual plant configuration.
- Definition of a roadmap for allowing up to 95% CO₂ reduction within 2035, by

Nanyang Technological University (NTU)

Singapore

Since July 2016

Research Fellow

Energy Conversion Systems, Smart Multi Energy System (SMES)

- Leading and Coordination of the Work Package “Polygeneration” (SMES Project)
 - *Coordination of the team: Research Associates, PhD Candidates and MD students*
 - *Actively involved in the Steering Committee of the whole SMES project*
 - *Meeting and discussion with national agency (i.e. NEA, EMA) and partner companies (i.e. Shell, JTC)*
- Consultancy for Energy Power plant installation of Jurong Port power plant
 - *Feasibility Study, Cost Benefit Analysis, NPV and ROI evaluations – 1.8M\$ Saving and 15% CO₂ reduction Proven*
 - *Cogeneration + Cooling technology and engineering*
- Development of the Optimal Planning simulation Tool (OPT)
 - *Modelling of SMES components (Engines, Chillers, Heat Exchangers, Building, Grid, Storage, others)*
 - *Multi-Objective function approach for accounting techno-economic optimization*
 - *Advanced mathematics: Hybrid Evolutionary and Simultaneous Algorithms coupled with Artificial Intelligence*

Sustainable Development of Energy, Water and Environment Systems (SDEWES)

Since August 2018

Scientific Advisory Board Member

- Evaluations of scientific journal paper, organization of conference and presentation.

Scientific Reviewer

Singapore

Since January 2015

- Energy Conversion and Management, Applied Energy Paper Reviewer, Energy, Renewable Energy & Journal of Environmental Management (**ELSEVIER**), **Energies** MDPI, American Society of Mechanical Engineers (ASME) Turbo Expo

University of Roma Tre

Rome, Italy

June 2014 - June 2016

Research Fellow

Energy Conversion Systems – Concentrated Solar Power Plants

- Development of component models for CSP power plants (OMSoP European Project)
- Technical / economic analysis and optimization for CSP power plants (OMSoP European Project)
- Laboratory Leader for Solar and Turbomachinery Test (OMSoP European Project)

Contract Professor

- Steering PhD candidates and MD students
- Thermodynamics and Fluid Dynamics Applied on Machines
- Machines and Energy Conversion Systems
- Member of the Examination Board for Turbomachinery, Fluid Machine and Thermodynamics and Fluid-Dynamics Applied on Machines

Italian Ministry for University and Research

Rome, Italy

March 2016

Project Evaluator

- MIUR-DAAD Joint Mobility Program

Co.Se.A

Bologna, Italy

November 2014 - February 2016

Consultant

- Internal Combustion Engine Failure Analysis
- Litigation on the Green Certificate for Power Generation

University of Roma Tre

Rome, Italy

September 2010 – May 2014

Cooperation Contract

- Development of component models for IGCC power plants (H2-IGCC European Project)
 - *Gasification Isle Simulator (Matching of elementary component models – Transfer Functions)*
 - *Power Isle Simulator (Matching of elementary component models, Turbomachineries and Heat Transfer Devices)*

Education

University of Roma Tre

Rome, Italy

January 2011 – June 2014

PhD at Doctoral School of Industrial and Mechanical Engineering

- Thesis Title: IGCC Power Plant Simulator: Gas Turbine and Steam Cycle

Association of Engineering

Rome, Italy

June 2010 – October 2010

Certification as Industrial Engineer

University of Roma Tre

Rome, Italy

Master degree of Industrial and Mechanical Engineering (110 out of 110 points cum Laude) Oct. 2007 – May 2010

- Thesis Title: Steam Cycle Simulator for Combined Power Plants

Bachelor of Industrial and Mechanical Engineering (107 out of 110 points)

Oct. 2004 - December 2007

- Thesis Title: Emulsions in reciprocating engines

Skills

Technical Skills

- Energy Conversion Systems, Development / Modelling of power plant component models, Fluid Machines and Turbomachinery, Internal Combustion Engine, Steam Cycles, Solar Power Plants, Heat Transfer Devices, Gas Turbine Cooling, Optimization Techniques, Neural Network, Unit Commitment & Master planning

Computer Skills

- Programming Fortran 77, Matlab, Python, Neuro Dimension, Aspen Suite, ANSYS, AutoCAD, Microsoft Office Suite, Web Browser, Photoshop Suite, Windows and Mac OS

Personal Skills

- Team Work, Leading PhD candidates, Master Degree students and technicians, Speaking at conferences
- Awarded as Outstanding Reviewer for Applied Energy International Journal, ELSEVIER.
- Awarded as Distinguished Scientist by Sustainable Development of Energy, Water and Environment Systems

Languages

- Native speaker: **Italian**
- Professional (spoken/written): **English**

Interest

- Photography (Professional Level), Travelling, Chess Playing (semi-Pro Level) , Sport (Cycling, Soccer, Horse Riding, Swimming, Diving), Cinema, Music and Art

ANNEX

Projects

SMES (2016 - On-going)

The proposed Smart Multi-Energy Systems (SMES) project hence aims to develop and demonstrate an intelligent multi-energy management & information system at a commercial industrial site through seamless integration of energy generation, storage and demand management facilities across the electric, thermal, and gas networks. This system will also have an enhanced information and communication technology (ICT) platform for supply/demand management and real-time energy market interactions.

Formulation of this project resulted from two sets of data-points: 1) Theoretical studies and simulations on multi-energy systems have shown the potential of greater than 30% cost reduction. 2) JTC's effort in addressing integrated estate management at Biopolis and Fusionopolis resulted in 15-18% cost savings. This effort at One-North did not extend beyond building automation and air-conditioning systems. Thus a full systems-integration and optimization approach that includes a montage of energy sources, load management, and market interaction clearly holds the potential to exceed both the One-North effort and the theoretical predictions of at least 30% cost reduction.

OMSoP (2014-2016)

The OMSoP project, co-funded by the European Union's 7th Framework Programme for Research and Development aims to provide and demonstrate technical solutions for the use of state-of-the-art concentrated solar power system (CSP) coupled to micro-gas turbines (MGT) to produce electricity. The intended system will be modular and capable of producing electricity in the range of 3-10 kW. In February 2013, the OMSoP project kicked off with 8 partners from 5 countries with a total budget of 5.8 million euro. Successful dissemination and implementation of the project results should result in the demonstration of the stand-alone-system, addressing the key innovation bottlenecks: the high temperature solar receiver, the stand-alone solar dish concentrator and the more reliable micro-gas turbine. During the 4-year project, the City University London will provide coordination and management service assisted by the [European Turbine Network](#) (ETN) who is also responsible for the dissemination activities.

<https://omsop.serverdata.net/Pages/Home.aspx>

H2-IGCC (2010-2014)

The overall objective of the H2-IGCC project is to provide and demonstrate technical solutions which will allow the use of state-of-the-art highly efficient, reliable gas turbines (GTs) in the next generation of Integrated Gasification Combined Cycle (IGCC) plants. The goal is to enable combustion of undiluted hydrogen-rich syngas with low NOx emissions and also allowing for high fuel flexibility. The challenge is to operate a stable and controllable GT on hydrogen-rich syngas with emissions and processes similar to current state-of-the-art natural GT engines. The H2-IGCC project aims to tackle this challenge as well as fuel flexibility, by enabling the burning of back-up fuels, such as natural gas, without adversely affecting the reliability and availability <http://www.h2-igcc.eu/default.aspx>
